Reference: Backflow Prevention

Q 1137

We are pleased to submit our quotation for alterations at the above address as discussed on site and described below.

Irving Hall.

To prevent contaminants from entering the drinking water we have allowed to supply and install 1 only 20mm HIGH RISH RPZD to the make-up water on the roof top plant area. To complete the above works we quote you the sum of \$ [REDACTED] Ex GST.

Pool plant Room.

To prevent contaminants from entering the drinking water we have allowed to supply and install 1 only 15mm HIGH RISH RPZD to the make-up water supplying the Heating water.

To complete the above works we quote you the sum of \$ [REDACTED] Ex GST

Thermostatic Mixing Valves (TMV'S) located at the site require annual maintenance to ensure scalding does not occur during showering or bathing. We would be pleased to provide annual maintenance including a written report at a cost of \$ [REDACTED] per valve Ex GST and excluding replacement parts. We advise that all TMV's require full replacement kits every 5 years. The TMV's I viewed in the Pool Plant Room may not have been maintained in the past and probably require full service kits at a cost of approx \$ [REDACTED] per Kit excluding GST.

I have attached a copy of the Code of Practice for TMV's.

I hope this quotation meets with your approval and look forward to working with you in the future,

Yours truly,

Paul Miles.
